

LINCOLN COUNTY BOARD OF EDUCATION GRIFFITHSVILLE ELEMENTARY SCHOOL

Griffithsville, West Virginia

Client Project

When a flood destroyed Griffithsville Elementary School in West Virginia, students, teachers, and administrative staff were displaced. The Lincoln County Board of Education had to find a quick solution in order to minimize any disruption to the school year. The initial solution placed the elementary school students in the same building and classrooms that were being occupied by the students at the nearby high school. Sharing classroom space and combining the age groups were not efficient solutions since they did not create an optimum learning environment and, displeased parents.

Client Need

The flood created two challenges for the school and the Board of Education. First, the elementary school students needed immediate space so classes could resume as normal. Since school was in session, timeliness was a major factor. Secondly, since FEMA funded the reconstruction project, site plans had to remain flexible to work around the historic house already located on campus. The Lincoln County Board of Education decided that the school required a construction solution that was both flexible and fast.

PROJECT CASE HISTORY

LINCOLN COUNTY BOARD OF EDUCATION GRIFFITHSVILLE ELEMENTARY SCHOOL Griffithsville, West Virginia

The Williams Scotsman Solution

Williams Scotsman provided the school with temporary classrooms within a month of the permit issue date. Two-11 piece Redi-Plex complexes were installed. Each Redi-Plex unit afforded 7,920 sq. feet. of new space to the school. The building had a drop ceiling, VCG interior walls, vinyl tile flooring, and a Dura-Temp exterior. Williams Scotsman designed restrooms specifically for use by small school children. J-boxes were installed to house a fire alarm system and data cabling for classrooms. Lastly, Williams Scotsman installed anchors and footers, and completed the exterior of the building with steps, ramps, and skirting.

The Result

The Lincoln County Board of Education was fully satisfied with the buildings and the quick, friendly service they received from Williams Scotsman and looking forward to working with them again in the future, if needed.

"Under the adverse site conditions, we are very pleased with the timeframe it took to complete the project. They completed the project with speed and efficiency as promised. Williams Scotsman did very well and we thank them." -David Vickers, Head of Maintenance-
