

ST. MARGARET MARY SCHOOL

Penbrook, Pennsylvania

Client Project

Fire destroyed the newly completed section of **St. Margaret Mary School**. As a result, this section required massive demolition, debris removal and new construction. School was in session and therefore students had been displaced. The scope of the project would take quite some time to complete and this created serious challenges for administrators.

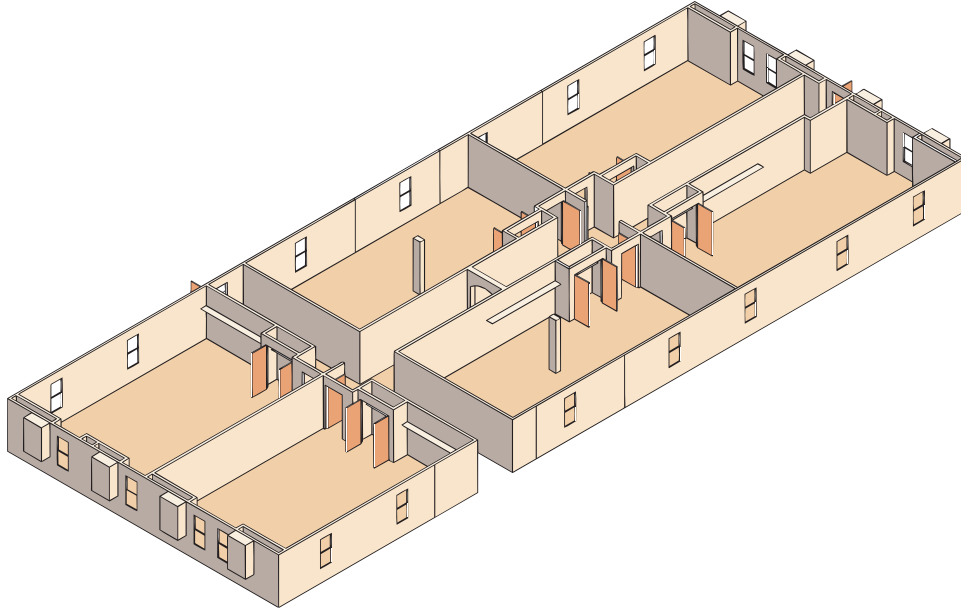

Client Need

The unforeseen tragedy created two challenges for the school. First, displaced students needed immediate temporary space so classes could resume. Since school was in session, time was of the essence. Secondly, the school needed to address the massive undertaking to rebuild. While temporary classrooms were adequate, school officials were also anxious to resume the more normal activities that would come with a permanent facility. Therefore, they wanted a construction solution that was both affordable and fast.

ST. MARGARET MARY SCHOOL

Penbrook, Pennsylvania

The Williams Scotsman Solution

Williams Scotsman provided the school with temporary classrooms within four days of the fire.

With the immediate need satisfied, they began work on the permanent building extension. Using turn-key construction, an eight section, 5,760 square foot Redi-Plex Building was installed. The building had a suspended acoustical ceiling, vinyl covered gypsum walls, insulated windows and steel exterior doors. **Williams Scotsman** installed recessed fluorescent emergency and exit lighting. The building was equipped with HVAC systems, fire alarms, a paging system, data cabling and a complete security system. **Williams Scotsman** constructed a corridor, linking the new building with the existing school. The exterior of the building was finished with Dura-Temp siding, which was painted to blend with the main school building. Custom decking, ramps and skirting were installed to complete the project.

The Result

"Even the diocese was floored by the quality of the work. Inside and out, the extension is well-built and has the look of a traditional building." Mike Modica, Building Committee Chairman.

"We're very proud of the school and the work Williams Scotsman has done for us."
